

# Workshop on Improving Regional Distribution of CDM Projects in Asia and Pacific

Key elements for effective CDM Project development

Manila, 09 September 2010

## CDM Processing Cycle

## Critical Aspects for Successful Registration

- Baseline
- Prior consideration of CDM in Investment
- Additionality
- Availability of approved baseline methodology
- Sustainable development
- No adverse environment and social impacts
- Monitoring

## Points to be kept in mind

- Make sure you have taken all emission sources in and outside the project boundary affected by the project
- Ensure you have considered the regulatory requirements relevant to your project in your country
- Fulfill all requirements of your country's DNA
- Be sure that you have correctly identified the baseline scenario
- Be conservative and transparent in the estimation of baseline, project and leakage emissions

## Points to be kept in mind contd.

- Ensure that the project meets all the applicability conditions of the chosen baseline methodology
- Explore the CDM website (<http://cdm.unfccc.int>) to see
  - if any similar projects have been registered
  - If any similar projects have been put through review and note the reasons there for
  - Understand the commonly encountered issues in validation
- Carefully review the additionality analysis
- Above all ensure all concerned stakeholders maintain essential documentation to establish
  - Serious prior consideration of CDM,
  - Decision to invest in the project,
  - Starting date
- Carefully review the monitoring plan especially the calibration requirements of the instruments
