Osamu Saito (Ed.)

Sharing Ecosystem Services

Building More Sustainable and Resilient Society

Series: Science for Sustainable Societies

- Demonstrates rural translation of newly emerging sharing paradigm to build more resilient and sustainable society in harmony with nature
- Focuses on the concept of “sharing ecosystem service” which have been often ignored by recent ecosystem services studies, even though it plays an important role in both developing and developed countries
- Sheds a light on future path in which sharing practices can contribute to making society more resilient, sustainable and inclusive through sharing ecosystem services

Using “the sharing paradigm” as a guiding concept, this book demonstrates that “sharing” has much greater potential to make rural society resilient, sustainable and inclusive through enriching all four sharing dimensions: informal, mediated, communal and commercial sharing. The chapters are divided into two parts, one that focuses on case studies of the sharing ecosystem services in Japan, the other on case studies from around the world including in the regions of Africa, Asia-Pacific, South America and Europe. Reflecting the recent growing attention to sharing concept and its application to economic and urban context, this publication explores opportunities and challenges to build more resilient and sustainable society in harmony with nature by critical examination of sharing practices in rural landscapes and seascapes around the world. This book introduces not only traditional communal and non-market sharing practices in different rural areas, but also new forms of sharing through integration of traditional practices and modern science and technologies.
