

Cooperation on Climate and Air Pollution in East Asia

September 29 – October 4, 2013

16th IUAPPA World Clean Air Congress,
Cape Town, South Africa

Mark Elder and Eric Zusman, IGES

OUTLINE

1. Air Pollution Cooperation
in East Asia

2. Air Pollution and Climate
Cooperation in East Asia

3. Conclusions

Existing UNEP-related regional/sub-regional air pollution initiatives in Asia

Central Asia

5 Central Asia countries formulated the Framework Convention on Preservation of Environment for Sustainable Development of Central Asia

South Asia:

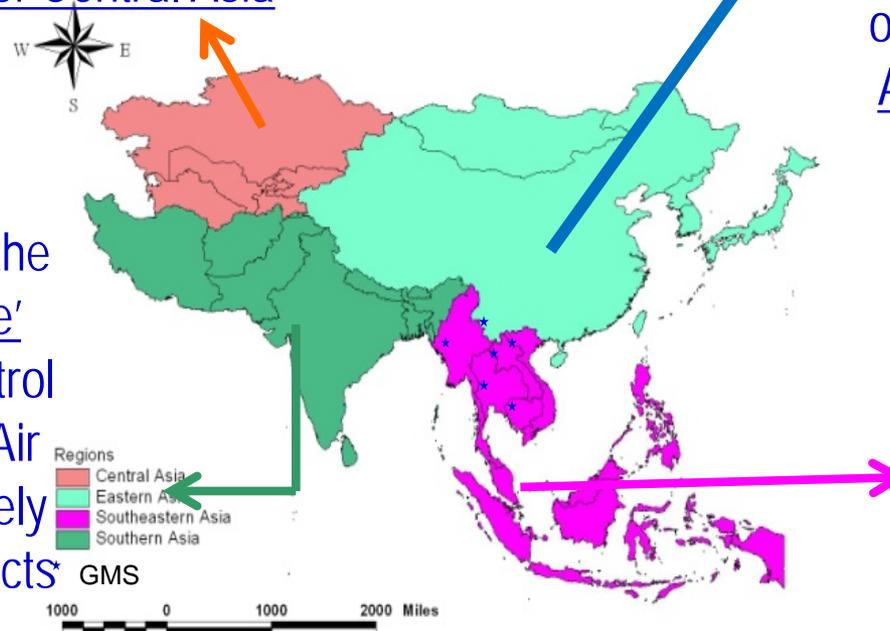

8 countries are cooperating under the framework of Male' Declaration on Control and Prevention of Air Pollution and Its likely Transboundary Effects for South Asia

East Asia:

13 countries, which includes Northeast and Southeast Asia, working under the framework of the East Asia Network on Acid Deposition Monitoring (EANET)

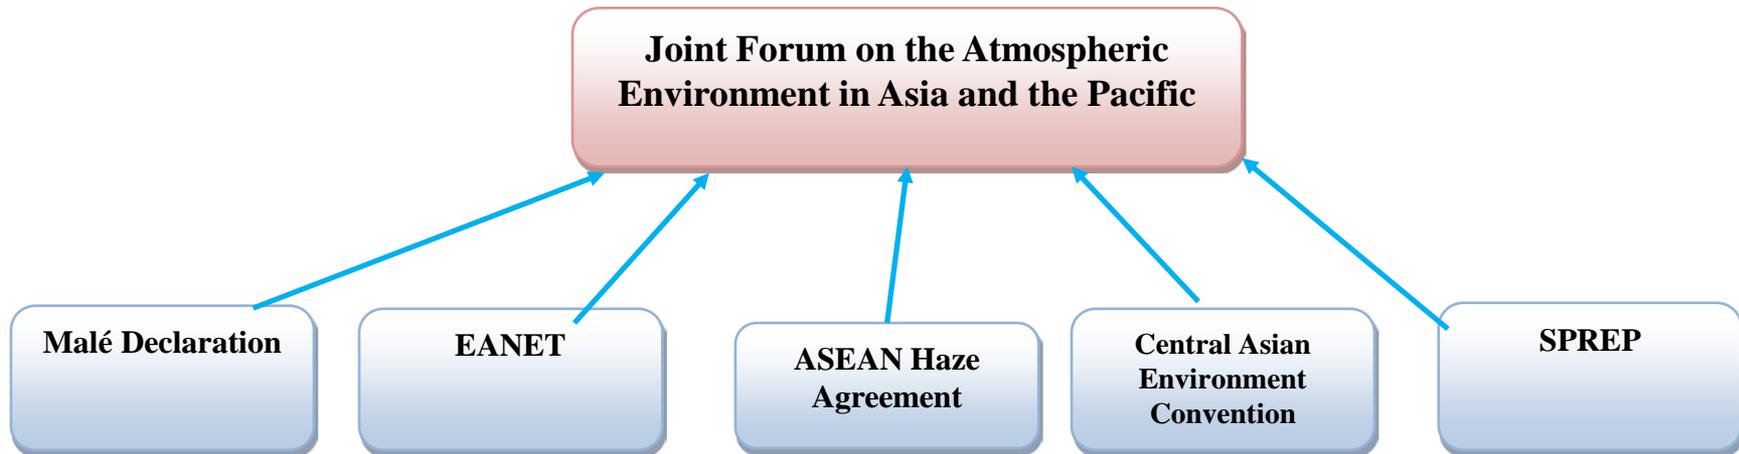

Southeast Asia:

ASEAN member countries are working under the framework of ASEAN Haze Agreement

Joint Forum on the Atmospheric Environment in Asia and the Pacific

Closer cooperation among regional/sub-regional air pollution networks to enhance exchange of information/experiences and capacity building

Meeting of the Joint Forum on Atmospheric Environment in Asia and the Pacific, 10-11 March 2010

Selected Existing Regional Air Pollution Cooperation Frameworks in East Asia

ABC	Atmospheric Brown Clouds <ul style="list-style-type: none"> • Global/regional 	<ul style="list-style-type: none"> • Includes air+climate
EANET	Acid Deposition Monitoring Network in East Asia <ul style="list-style-type: none"> • Northeast + Southeast Asia 	<ul style="list-style-type: none"> • Mainly monitoring • Narrow scope
Joint Forum	Joint Forum on the Atmospheric Environment in Asia and the Pacific <ul style="list-style-type: none"> • Asia-wide 	<ul style="list-style-type: none"> • Network of networks (UNEP)
TEMM	Tripartite Environment Ministers Meeting <ul style="list-style-type: none"> • Northeast Asia (China, Japan, Korea) 	<ul style="list-style-type: none"> • Regular meeting • Collection of projects
LTP	Long Range Transboundary Air Pollutants in Northeast Asia <ul style="list-style-type: none"> • Northeast Asia (China, Japan, Korea) 	<ul style="list-style-type: none"> • Research project • Broader scope (but not climate)
NEASPEC	Northeast Asia Program on Environmental Cooperation <ul style="list-style-type: none"> • Northeast Asia (6 countries) 	<ul style="list-style-type: none"> • Secretariat is ESCAP-SRO • Project based
CAA	Clean Air Asia (formerly CAI-Asia) <ul style="list-style-type: none"> • Asia-wide 	<ul style="list-style-type: none"> • Multistakeholder partnership

Membership in Selected Existing Frameworks

Countries	EANET	ASEAN Haze	NEASPEC	LTP	TEMM	CCAC
China	●		●	●	●	●
Japan	●		●	●	●	●
S. Korea	●		●	●	●	
N. Korea			●			
Mongolia	●		●			
Russia	●		●			
Cambodia	●	●				
Indonesia	●	Not ratified				
Lao PDR	●	●				
Malaysia	●	●				
Myanmar	●	●				
Philippines	●	●				
Thailand	●	●				
Vietnam	●	●				
Brunei		●				
Singapore		●				

Overall Problems with Existing Frameworks (From the standpoint of air pollution)

- Overall: too cautious and lacking in ambition, voluntary
- Duplication & overlap, extra cost
- Insufficient scope: need more emphasis on mitigation, linkage between air pollution & climate change
- Limited effectiveness
- Insufficient funding
- Should strengthen linkage to policy & implementation

Potential Links between Air Pollution Frameworks and Climate

- Additional scientific research (especially monitoring)
- Awareness raising on air and climate issues
- Capacity building
- Policy dialogues
- Projects

**Question: to what extent can existing frameworks make these links?
May be challenging to incorporate into some existing frameworks.**

Challenges to linking climate and air pollution in existing frameworks

- Most frameworks limit the scope of pollutants. Expansion to air pollutants like O₃ and PM_{2.5} may be easier. Can they be further expanded to Hg or others?
- However, in the past, it has been difficult to expand the scope of existing initiatives/ frameworks once they were established.
- Strong effort may be needed to persuade governments about the priority of co-benefits, and the appropriateness of using existing initiatives/ frameworks
- Many developing countries need comprehensive capacity building, including for scientific research

- Not very optimistic about using existing frameworks in short term
- May be better to focus on domestic use first, to attract governments' interest. International cooperation frameworks can facilitate actions.

Situation of CCAC in East Asia

Promising new network

- Voluntary
- Multistakeholder partnership
- Focus on SLCP co-benefits
- New funding (including contribution from Japan)

Activities in Asia

- Development of national action plans
- Regional/sub-regional workshops
- Conduct regional assessment

Challenges

- Only 2 E. Asian countries are members (Japan, S. Korea)
- Uncertain prospects for new members
- Unclear links between CCAC & existing mechanisms

POSSIBLE OPTIONS

KEY ISSUES:

- What is the best forum to discuss air pollution and climate change issues in East Asia?
- Who may coordinate discussions?
- (Besides existing intergovernmental networks)

OPTION	CONSIDERATIONS
UNEP	<ul style="list-style-type: none">• United Nations• Environment ministries• Coordinates EANET, others
UNESCAP	<ul style="list-style-type: none">• United Nations• Foreign ministries• Coordinates NEASPEC• Limited capacity
Joint Forum	<ul style="list-style-type: none">• Links existing UNEP networks• Limited institutionalization
CAA	<ul style="list-style-type: none">• Multistakeholder partnership

Japan's Policies on Co-benefits: Co-benefit Projects in the Asian Region

❖ New Budget Request (Ministry of Environment)

❖ FY 2013 => FY2014 (215 => 658 mil. Yen)

Background

- Address worsening air & water pollution, not only PM2.5 in China but also in other Asian countries.
- Use a co-benefit approach for environment & climate, especially PM 2.5
- Strategically promote capacity building for co-benefits using Japanese technology & experience utilizing existing activities & promoting bilateral credit offsets.

Project Overview/Scheme

- Support for existing regional activities (UNEP & CAA)
- Capacity & system building (subcontracted to private sector & local groups)
- Model/pilot projects to test application of Japanese co-benefit tech.

Objectives, expected results

- Promote capacity dev. & best use of Japanese env. tech. to Asian developing countries
- Mitigate pollution, promote decarbonization in Asia, & reduce air pollution in Japan
- Promote bilateral offset credits

Japan's Policies on Co-benefits: Promotion of the Co-benefit Approach

❖ New Budget Request (Ministry of Environment) FY2014 (101 => 105 mil. Yen)

Project Summary (General Budget)	
Promotion activities	<ul style="list-style-type: none">• Support the Asia co-benefit Partnership to help mainstream co-benefits
Implementation cooperation	<ul style="list-style-type: none">• Joint research to develop quantitative methodologies to evaluate co-benefit effects (including related capacity building)
Support for research	<ul style="list-style-type: none">• Support developing analytical models to contribute to Japan's environmental policy. (Support civilian organizations and IIASA)

Project Summary (Special Budget)	
Research / project support	<ul style="list-style-type: none">• Model projects & technology testing to promote capacity development including human resources keeping in mind the importance of supporting the introduction of technology from the bilateral credit offset mechanism.

Asia Co-benefit Partnership (Overview)

- A platform to improve information sharing and stakeholder coordination on co-benefits in Asia.
- Goal: support mainstreaming of co-benefits into decisions in Asia.
- Partners: ADB, CAA, ESCAP, UNU, UNEP, GAP Forum, China, Indonesia, Japan, Thailand etc.

IGES is the secretariat

The screenshot shows the homepage of the Asian Co-benefits Partnership website. At the top, there is a navigation bar with the IGES logo and links for HOME, About this site, Copyright, Privacy policy, Site map, and Contact. A search bar is also present. The main heading is "Asian Co-benefits Partnership" with the subtitle "Promoting Co-benefits in Asia". Below this, a circular graphic is composed of several segments containing images of nature (sunflowers, water bubbles, a city skyline, and a person speaking). The text on the page includes: "7 July" (likely a date of an event), "What's New?" with a list of recent activities such as "Launching the Asian Co-benefits Partnership at the Better Air Quality (BAQ) 2010", "IGES Pre-Event at Better Air Quality (BAQ) 2010: Accounting for Co-benefits in Asia's Transportation Sector: Methods and Applications", "Seminar on a Co-benefits Approach: Emerging Trends and Needs", and two "Network Meeting: A Co-benefits Network for Asia and the Pacific" events. There are sections for "About" (About the Partnership, Major Functions, Membership), "Activities" (with a video thumbnail), "Publications & Tools" (with a thumbnail for the "Transport Co-benefits Calculator"), and "Contact us" (providing the address of the IGES Climate Change Group in Japan). At the bottom, there are logos for the Ministry of the Environment, UNEP, and ADB, along with the ESCAP logo. A copyright notice for IGES is at the very bottom.

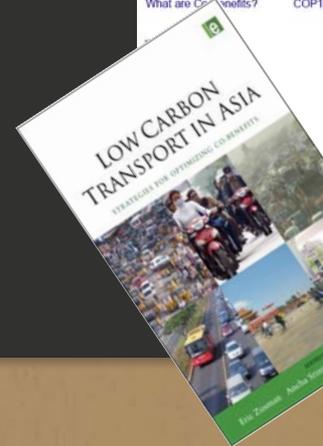

Asia Co-benefit Partnership Activities

- **Information sharing and knowledge management, including knowledge generation and dissemination**
- **Enhanced communication among ACP members**
- **Development of co-benefits policies and projects in Asia**
- **Strengthening of regional cooperation to promote co-benefits**

The screenshot shows the website for the Asian Co-benefits Partnership. At the top, there is a navigation bar with the IGES logo and links for Home, About, Activities, Partners, Publications & Tools, and Contact us. The main heading is "Asian Co-benefits Partnership Publications & Tools". Below this, there are two sections: "Newsletters" and "Factsheets".

Newsletters: Three newsletter covers are displayed, labeled "The Co-benefits Corner Newsletter Vol.1 2011", "The Co-benefits Corner Newsletter Vol.2 2012", and "The Co-benefits Corner Newsletter Vol.3 2012".

Factsheets: Three factsheet covers are displayed, labeled "ACP Factsheet No.1 What are Co-benefits?", "ACP Factsheet No.2 COP16 and Co-benefits", and "ACP Factsheet No.3 Make Co-benefits Work: China Case".

Research on Co-benefits in Asia (examples)

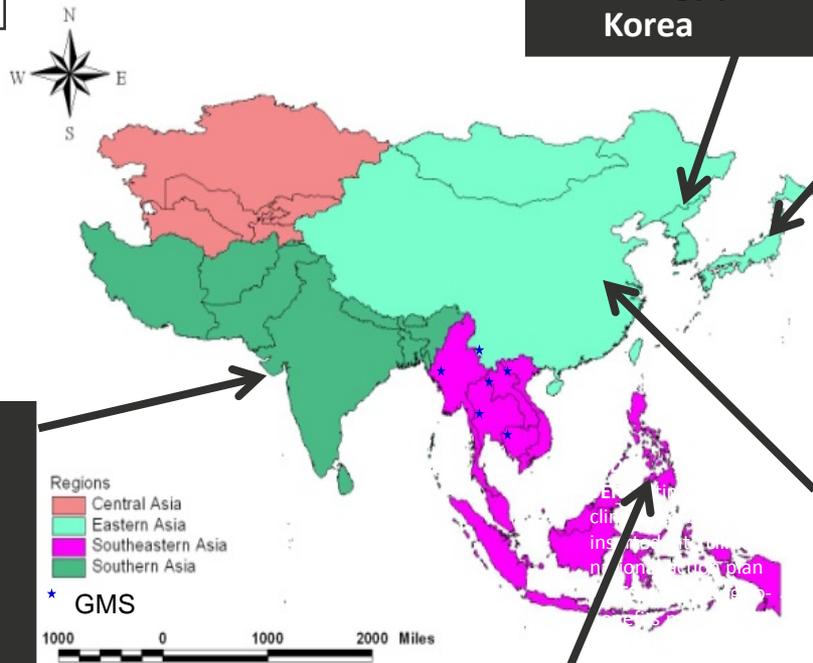

*This is not an exhaustive list; it is meant to convey the growing interest in estimating co-benefits

KOREA

- KEI-estimating co-benefits of transport and energy policies in Korea

JAPAN

- IGES-research on co-benefits in transport and waste sectors as well transregional air pollution
- OECC-Disseminating co-benefit project tool for CDM projects in China & Southeast Asia

INDIA

- TERI-estimating climate co-benefits; inserted into climate national action plan
- RITES-supporting co-benefits modeling in Hyderabad

CHINA

- ERI-Estimating co-benefits using GAINS model
- Tsinghua University/PRCEE-Several studies on co-benefits in Beijing and national study
- Shanghai Academy of Environmental Sciences-Estimate of co-benefits in Shanghai

PHILIPPINES

- CAI-Asia-supporting series of research and outreach activities on co-benefits, including community of practice

China & Climate/Air Pollution Co-benefits

- Chinese government is very interested in co-benefits (for cost savings)
- Chinese government funds domestic co-benefits research
- Chinese researchers use the concept of co-control, not co-benefit.
- China is already implementing large scale co-benefit measures in a broad sense (e.g. energy efficiency)
- China's interest in joining formal multilateral cooperation frameworks or networks is not clear. Some bilateral cooperation is occurring.

Conclusions

Optimistic Points

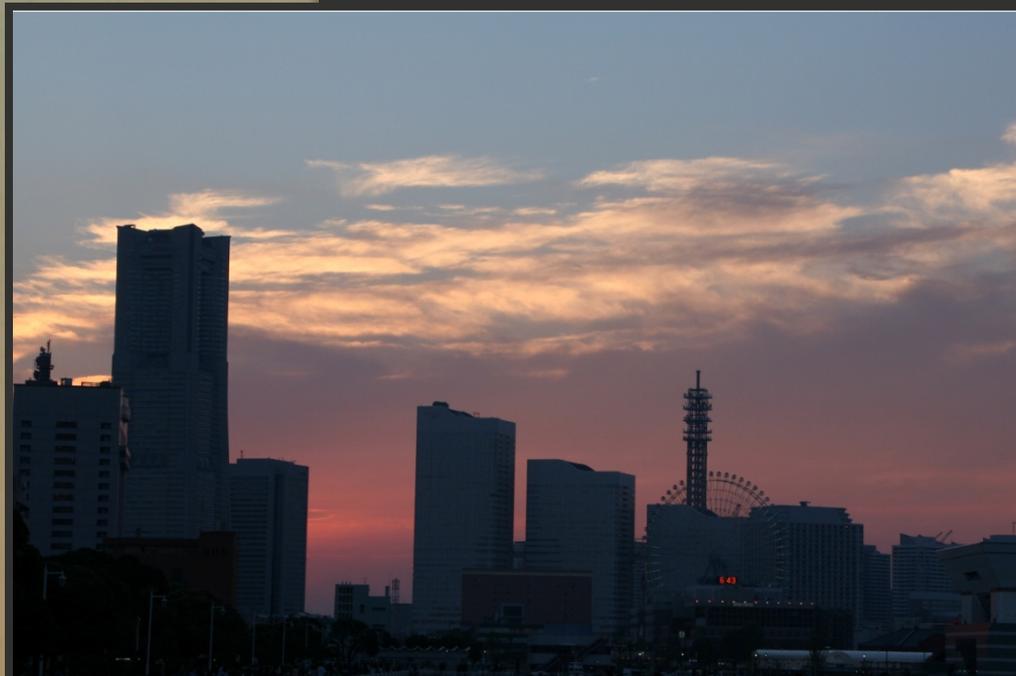

- Existing frameworks in East Asia could link with co-benefits in principle.
- Linkage areas may focus particularly on monitoring, modeling, capacity building, mitigation, adaptation, etc.
- Japan is promoting international cooperation
- China is promoting domestically

Challenges

- Existing intergovernmental networks may not easily incorporate SLCP/co-benefits in the short term
- Unclear links between CCAC and existing mechanisms
- Many developing countries need comprehensive capacity building, including for scientific research

Other Points

- Maybe promote domestically first; international cooperation to facilitate
- Consider co-control, not just co-benefits
- Co-benefits approach requires coordination between and within climate and air pollution authorities.

Thank You!

Acknowledgments: This research was supported by the Environment Research and Technology Development Fund (S-7-3) of the Ministry of the Environment, Japan.
