

Challenges & possible directions for SR-Cities

- Two broad challenges – synthesis and actionable solutions
 1. The broad scope of stakeholders and cross-IPCC Working Group topics speaks to the challenge of integrating & synthesizing “urban” research → but it also speaks to the importance of the SR-Cities report
 2. How do we distil the assessment results to be actionable (leading to successful climate action) across cities for different regions & contexts?

How can the Japanese & international “urban” community contribute to SR-Cities?

- Develop symposia & conferences with “urban” themes → literature that can be included for SR-Cities
- Strong focus on (English) research from Japan and the region already exists
- Integrate networks between academics, subnational governments & practitioners
