# Pathways to Zero: Climate Change and Redesigning Cities (Responding, Recovering and Redesigning in the Face of COVID)

## Background & Purpose

- Decarbonization is indispensable part of the realization of better recovery from COVID-19, and challenge is to create a virtuous cycle of environment, society, and economy towards decarbonization.
- Through capturing the pioneering policies and actions to achieve decarbonization by many cities from different background, this session aims to deepen the understanding of the challenges and merits of taking such actions and thus contributing to the acceleration of local governments joining the UNFCCC Race To Zero campaign.
- The session outcome will also contribute to the Zero Carbon City Forum planned to be held in early 2021, by the Government of Japan
