

Workshop on Marine Debris Reduction and Waste Management

# JICA's Approach to Marine Waste Management

MATSUOKA Hideaki
Director, Environmental Management Team 1
Environmental Management Group
Global Environment Department, JICA

### JICA is an Implementing Agency of Japanese ODA

#### JICA's Approach to Marine Waste

Support solid waste management on <u>land</u> in <u>developing countries</u>, which are estimated to produce large amounts of plastic waste.

80% of total marine plastic waste comes from <a href="land">land</a>.\*

Most marine waste is released from developing countries. \*\*

Promotion of appropriate waste management

Assistance for developing countries that release a large amount of plastic waste

# JICA's Project map on solid waste management in Asia & Pacific (as of April 2020)

#### **Example: Proper collection and disposal**

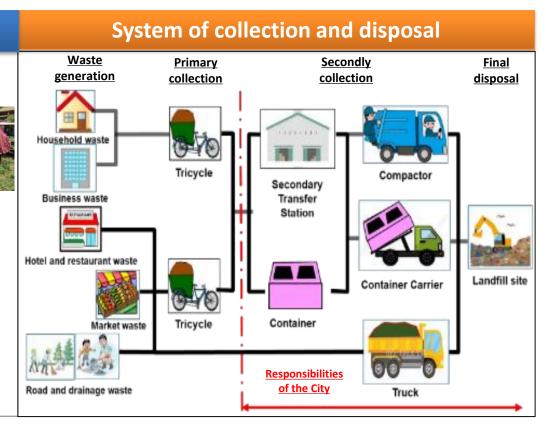

#### Bangladesh: Clean Dhaka Project (2000-)

#### **Cooperation for Dhaka**

- Expand district authority and improve collection system [T/C]
- Supply compactor, improve final disposal [Grants]
- Awareness raising for citizens[JICA Volunteer]

Next Step

Formulate Master Plan by 2032, consider further support including investment

Waste collection rate: 44% (2004)  $\Rightarrow 80\%$  (2017)

Amount of waste collection per day : 1,400t (2004)  $\rightarrow$  4,948t (2017)

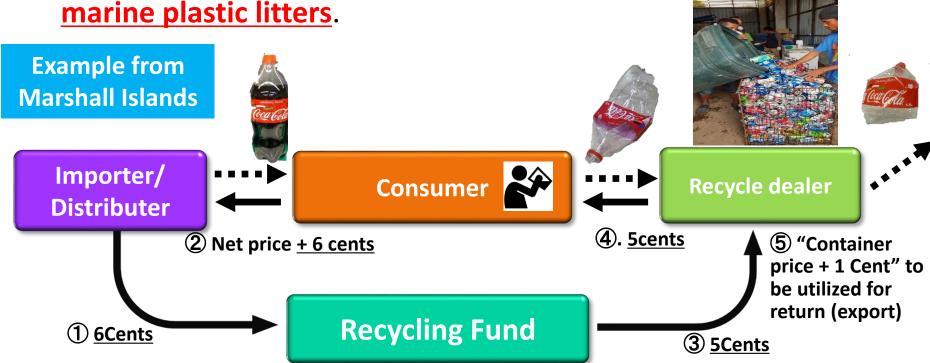

4

# **Example: Add economic incentive:**Container Deposit Legislation (CDL)

#### 'J-PRISM' Project (phase I/II) in Pacific Island Countries (2011-2022)\*

- In small island countries, <u>containers need to be "Returned"</u>. For sustainable CDL system, <u>the mechanism involving importers and create management fund</u> for collection center are crucial. → Promotion of 3R+Return
- Deposit is included in the price, and redeemed once the container is returned to collection center. It increases container collection rate, and prevent outflowing marine plactic litters.

<sup>\*(</sup>Japanese) Project for Promotion of Regional Initiative on Solid Waste Management in Pacific Island Countries

#### **JICA's 5 Approaches**

#### 1. Evidence-based Approach

Research and data collection surveys

#### 2. <u>Developing Waste Management Systems</u>

Promotion of proper collection and disposal, circular economy

#### 3. Introducing Alternative Materials

Introduction of biodegradable materials

#### 4. Awareness Raising of Citizens

Collaboration with effective materials

#### 5. Encouraging Networking and Co-learning

Among different countries in the region

# Thank you for your attention.
